FORAGE GRASS & CLOVER

DMX-H™ hay mixture

LG-31 orchardgrass	40%
WINNETOU timothy	30%
RENEGADE red clover	30%

50 lb. bag
recommended seeding rate: 15-20 lbs/a

NOTE: If sowing DMX-H with an alfalfa, recommended seeding rate is 5-8 lbs/a of DMX-H with 15-18 lbs/a of alfalfa

- useful in a traditional 3-cutting system or an intensely managed 5+ cutting system
- ideal for nutrient management
- consider as a dry-cow feed if soil potassium levels are properly managed
- orchardgrass selected to withstand Northeast winters; very disease-resistant, high yielding & late heading
- timothy will tolerate wetter, heavier soils & deliver heavy "yield-punch" in early spring & late summer or fall
- red clover is high yielding, has erect plant structure & is early flowering which places it more in sync with grass components of the mixture to maximize mixture's quality

Percentages of mixture ingredients are *suggestive* of actual amounts. *Actual* percentages will appear on labeled bags of seed.

We're DOEBLER'S®
... "Your Regional Advantage"™

DMX-FT™ alfalfa-timothy mixture

PROLIFIC II alfalfa	80%
WINNETOU timothy	20%

50 lb. bag
recommended seeding rate: 30-35 lbs/a

- highly productive mixture
- strong performer in well-drained to poorly-drained soils.

DMX-P™ pasture mixture

MARTIN 2 tall fescue	35%
LG-31 orchardgrass	25%
ORANTAS 2N per. ryegrass	20%
RENEGADE red clover	8%
WINNETOU timothy	6%
JUMBO white clover	6%

50 lb. bag
recommended seeding rate: 25-30 lbs/a

- ideal for grazing for first cutting or for season-long grazing
- well-suited for hay/haylage
- endophyte-free tall fescue offers improved forage quality & tonnage with longevity of stand & improved rust resistance
- white clover is very winterhardy
- orchardgrass, perennial ryegrass, red clover and timothy are all important contributors to the mixture

DEBUTANTE™ horse pasture mixture

50 lb. bag
recommended seeding rate:
25 lbs/a if drilled or broadcast

ORANTAS 2N perennial ryegrass	25%
BALIN Kentucky bluegrass	20%
LAURA meadow fescue	20%
LG-31 orchardgrass	20%
WINNETOU timothy	15%

For hay making, combine 1 unit of Debutante with 1 unit of orchardgrass (dryer soils); or combine 2 units of Debutante with 1 unit of timothy (wetter soils).

- excellent feed source
- resilient sod base that stands up to heavy hoof traffic
- perennial ryegrass provides palatable feed with rapid regrowth
- bluegrass - excellent early spring growth, rapid recovery from harvest or grazing, fills in bare spots very quickly
- meadow fescue establishes itself quickly, tolerates close grazing & poorly drained soils very well
- orchardgrass provides very consistent supply of high quality forage; also provides for extended season grazing well into summer, very late into fall & often into early winter
- timothy provides much desired leafy texture & extra palatability

- NO TALL FESCUE
- ENDOPHYTE-FREE

NOTE: On occasion, circumstances beyond Doebler's control may interfere with the availability of one or more products or seed mixture ingredients. These occurrences may require Doebler's to search for and use a substitute variety. When substituting, Doebler's will make every effort to ensure the replacement is of similar value and that both agronomic characteristics and forage quality are as close as possible to those of the original product or ingredient.

FORAGE GRASS & CLOVER

WINNETOU timothy

50 lb. bag
recommended seeding rate:
10-12 lbs/a for pure stands

- flexible, persistent hay type
- late heading
- excellent for grazing or multiple hay cutting
- great disease resistance package
- highly palatable
- expect high dry matter yield

LG-31 orchardgrass

50 lb. bag
recommended seeding rate:
12-14 lbs/a for pure stands

- non-clumping
- aggressively spreading
- longer season of growth
- high yield expectation
- excellent palatability & digestibility
- very winterhardy
- unique low-to-the-ground growth habit
- good tolerance to close grazing & wheel traffic

pure varieties

RENEGADE red clover

25 lb. bag
recommended seeding rate:
10-12 lbs/a - pure stands;
6-8 lbs/a - mixed

- erect, very productive & early flowering
- double cut with improved disease resistance
- very good digestibility & feed value scores
- very rapid recovery rate after harvest due to high rate of tiller growth
- performs well in poorly drained soils

JUMBO white clover

25 lb. bag
recommended seeding rate:
2-4 lbs/a into existing pastures

- Ladino-type
- very large leaf, up to 3 in.
- grows fast; very vigorous
- improves pastures when seeded at recommended ratio of up to 30% with grasses
- used in new seedings or to overseed existing pastures

available from DOEBLER'S

ECO HAY

Water soluble inoculant for liquid application to high moisture alfalfa and grass hay. Contains two elite strains of *Pediococcus pentosaceus* that grow very quickly to occupy the niche where harmful molds may otherwise flourish.

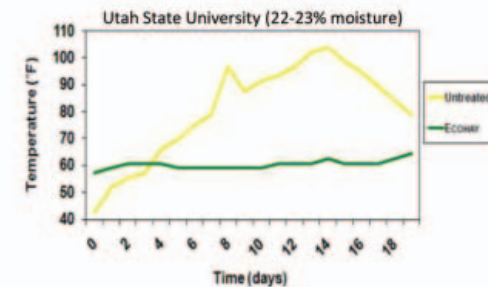

Features

- Bacterial Inoculant
- 500,000 CFU *Pediococcus pentosaceus*
- Non-toxic
- Non-corrosive
- Concentrated Powder
- Applied as a liquid

Benefits

- Grows where molds would have
- Works where others don't
- Safe for user
- Will not damage equipment
- Easy to store, mix and use
- Even application, immediately active
